

## **Recommended method of Studying**

**1. Do the study guide.**

Answer every question in full. Look up answers you are not totally sure of. You could get three bonus marks on your test for doing this.

**2. Key Terms.**

Review all of the key terms and their definitions to ensure understanding of what they mean and what context they can be used in. You can use the Quizlets from the moodle site to assist you in memorizing these words.

**3. Re-read your notes.**

The notes are a summary of the most important information provided from the textbook. Look them over and make sure you understand them. Try to think about what type of questions could be asked from each section of notes.

**4. Look over your assigned questions from the unit.**

Look at the topic review questions as well as questions from any activity/lab that we did. Review them while paying extra attention to any questions that you may have gotten wrong when they were assigned to ensure that you learned from them and understand them.

**5. Do practice tests from Quest A+ Website.**

Make sure you are on Grade 9 and do the practice tests for the appropriate unit.

**6. Read through the topic in the textbook.**

Look for any information that we did not cover in class or in the notes that could be asked about on the test.
